Perhaps you want to make your first batch right away. If you have not already done so, one needs to have purchased good quality **distilled water**.

## QUICKSTART INSTRUCTIONS

Unpack the product and follow the simple instructions. DO NOT REMOVE OR TAMPER WITH THE WHITE BEADS ON THE SILVER ELECTRODE ENDS.

- 1) Fill the glass to the mark with distilled water.   
(Do not use municipal tap water)

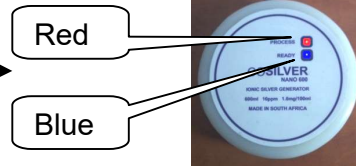

- 2) Connect the wall supply to the COSILVER generator and plug in at the wall. 

- 3) Place the generator unit on the glass and switch on at the wall socket. 

- 4) The red and blue indicators will flash for 10sec.  
(During this time, one can reset the unit by shorting both electrodes together with any metal utensil. When reset, a continuous Blue will show).

- 5) Now Blue will flash ten times and stop. Then Red will flash throughout the process.  
(Note that (5) will not occur when the unit is returning from a power failure)

- 6) Now only Red is flashing. The process has started

- 7) Leave the unit for up to 8hrs. When the silver water is "Ready", the Red indicator will go off and the Blue (Ready) indicator will come on.

Switch off at the wall, gently wipe the electrodes clean. Make another batch??

## SIMPLE SUMMARY OF OPERATION

### Normal Operation

Simply fill with water, plug in and switch on. There is no more to do. The unit is completely automatic and will complete the process. The process is complete when the (READY) blue indicator is continuously on. Just switch off, remove the head unit and wipe down both electrodes.

### Power Failures (Artificial Intelligence)

If, and during the process, the power fails for any reason, simply leave the unit plugged in and switched on at the wall. The unit records the runtime expired before it shuts down. When power returns, the unit recovers from the power failure and continues on for a total runtime of approx. 8hrs. Note that if the power failure was for say, 3hrs, then the unit will complete the process in 8+3 = 11hrs.  
( The unit may be reset to zero by shorting the two electrodes together during (4)

NOTE: THE WHITE BEADS WILL BECOME GREY OVER TIME. THIS IS NORMAL

### DOSAGES AND APPLICATIONS [Download the full manual from www.cosilver.co.za.](http://www.cosilver.co.za)

Argyria is a slight discolouration of the skin and nails. It can occur from consuming large quantities of silver salts. Ionic silver is a completely different substance and no such side effects have ever been associated with the normal use of ionic silver. When treating severe infections, no harm will result from exceeding the recommended doses.

**COSILVER** ionic silver is completely safe to use externally and as directed when taken internally. Ionic silver will not cause any pain or sting on an open wound or to the eyes and will have a soothing effect. For external use on cuts, abrasions, skin infections, burns, boils, etc., the amount of ionic silver applied is not critical. It can be dabbed on with a small pad, sprayed on or massaged into the skin. For warts, saturate a plaster or bandage with ionic silver and apply. A tooth abscess can be treated by the regular massage of ionic silver into the infected gum area.

In general terms, the challenge is how to best deliver ionic silver to the infected area. While external application is simple, internal benefit is derived from holding under the tongue before swallowing recommended amounts or inhaling a spray or mist through the mouth/nose. Disposable syringes (no needles) can be useful for pets and are available through chemists and drug stores.

Dosage Table for the **COSILVER** 12 – 16ppm ionic silver.

- ◆ Regular Use Per Day – implies regular daily consumption.
- ◆ Short Term Per Day – implies high dosage for specific treatment and should be taken for no more than 10 days in any month.

Identify your body mass in kg or lb. Scan across the table to see the regular or short term daily dose of ionic silver that can be taken internally. Use the same table for animals.

Ionic silver is reported to kill more than one thousand different pathogens within a few minutes of contact. Some examples of common ailments are given in the following table.

#### IMPORTANT NOTE:

When a health professional prescribes antibiotics, one is always instructed to "Finish the course" and of course few do.

RECOMMENDED DAILY LIMIT FOR INGESTION					
Body Mass		Regular Use Per Day		Short Term Per Day	
(kg)	(lb)	teaspoon	tablespoon	teaspoon	tablespoon
10	22	0.5	----	2.5	1.0
20	44	1	----	5.0	1.5
30	66	1.5	0.5	7.5	2.5
40	88	2.0	----	10.0	3.5
50	110	2.5	----	12.5	4.0
60	132	3.0	1.0	15.0	5.0
70	154	3.5	1.0	17.5	6.0
80	176	4.0	1.5	20.0	6.5
90	198	4.5	1.5	22.0	7.5
100	220	5.0	1.5	25.0	8.5
120	264	6.0	2.0	30.0	10.0
140	308	7.0	2.5	35.0	11.5
160	352	8.0	2.5	40.0	13.0
180	396	9.0	3.0	45.0	15.0
200	440	10.0	3.5	50.0	16.5

It is therefore prudent to continue taking or applying ionic silver for some time after the symptoms have disappeared. One must ensure that all of the infection has been killed off.
